汇报内容 Outline

- **项目背景和主要实施过程**
Project Background and Implementation Process
- **《行动计划》绩效评估指标与方法体系研究**
Study on Performance Evaluation Indicators and Methodology System for the Action Plan
- **“十三五”与2030年大气污染防治目标与路线图**
Air Pollution Prevention and Control Targets and Roadmap for the 13th FYP and 2030 Long-term Plan
- **区域大气污染防治协调机制国际经验**
Study on International Experiences of Coordination Mechanism for Regional Air Pollution Prevention and Control
- **区域大气污染防治协调机制与政策研究**
Coordination Mechanism and Policy Study for Regional Air Pollution Prevention and Control
- **主要研究结论与政策建议**
Major Research Conclusions and Policy Recommendations

研究背景 Background

主要大气污染物排放量巨大 Huge emissions of major air pollutants

- 我国主要大气污染物排放量迅速增长，都已升居**世界第一**
China becomes the **world's largest emitter** of major pollutants.
- 2012年，我国SO₂、NO_x等排放量与美国1990年排放水平相当，若削减至美国2009年排放水平，则**分别削减60%、45%**
The SO₂ and NO_x emissions of China in 2012 are comparable to the level of the U.S in 1990, a **reduction by 60% and 45%** respectively is needed to reach the U.S. level in 2009.

研究背景 Background

全国大气污染形势极为严峻: $\text{PM}_{2.5}$ 浓度距达标差距较大

A wide gap between $\text{PM}_{2.5}$ concentration and the standard

2013年 $\text{PM}_{2.5}$ 浓度超标情况
 $\text{PM}_{2.5}$ concentration in 2013

- 首批开展 $\text{PM}_{2.5}$ 监测的74个城市中, 有71个不达标
71 cities out of 74 (started $\text{PM}_{2.5}$ monitoring since 2013) fail to comply with the $\text{PM}_{2.5}$ standard.
- 京津冀区域 $\text{PM}_{2.5}$ 平均浓度为二级标准的3.0倍
Beijing-Tianjin-Hebei region (JJJ): 3 times the level of Grade-II standard
- 长三角区域 $\text{PM}_{2.5}$ 平均浓度为二级标准的1.9倍
Yangtze River Delta region (YRD): 1.9 times the level of Grade-II standard
- 珠三角区域 $\text{PM}_{2.5}$ 平均浓度为二级标准的1.3倍
Pearl River Delta region (PRD): 1.3 times the level of Grade-II standard
- 74个城市 $\text{PM}_{2.5}$ 平均浓度为二级标准的2.1倍
74 cities: 2.1 times the level of Grade-II standard

党中央和新一届政府高度重视大气污染防治工作

High attention paid by the Party and the government to AP control

- 党的“十八大”提出建设生态文明和美丽中国的目标

Promote ecological progress and build a beautiful country, from Report to the 18th National Congress of the Communist Party of China

- 在第七次全国环保大会上对大气污染防治工作等提出明确要求

Requirements on air pollution control at the 7th National Conference on Environmental Protection

- 进一步加强大气污染防治，修订并发布空气质量标准，抓紧做好增加PM_{2.5}监测指标的准备，鼓励各地根据污染特征、经济发展水平等分期实施，逐步与国际标准接轨。

Strengthen air pollution control. Amend the new ambient air quality standard. Start to prepare PM_{2.5} monitoring. Integrate with international standard step by step based on local pollution characteristics and the level of economic development.

新一届政府制定行动计划，制定了严格的措施

Action Plan and stringent measures developed by the government

专家建议 Recommendations

中国环境与发展国际合作委员会 信息专报

2013 年 第 1 期

2013 年 1 月 28 日

近期大气重污染事件研究
及大气环境质量改善的政策建议

今年1月以来，严重的雾霾席卷了中国中东部地区。中国74个城市从1月1日起公布PM2.5数据，在过去的十几天中

项目主要实施进程 Progress of the Project

- 1) 2月项目启动会暨第一次工作会议 Feb, the kick-off/first working meeting in Beijing
- 2) 5月项目第二次工作会议 May, the second working meeting in Beijing
- 3) 7月项目第三次工作会议 Jul, the third working meeting in Washington DC
- 4) 8月项目第四次工作会议 Aug, the fourth working meeting in Beijing
- 5) 期间多次内部技术专家讨论会 Several internal project meetings in Beijing

研究内容1) 《行动计划》绩效评估指标与方法体系研究

1) Task 1: Study on Performance Evaluation Indicators and Methodology System for the Action Plan

以签订目标责任书的形式确定了2017年31个省空气质量改善目标
Letter of target signed on AP targets for 31 provinces

目标分档原则

Principles for classification

- 各地社会经济发展现状

Current social and economic development

- 结合当地空气质量现状

Current air quality

目标分档类型

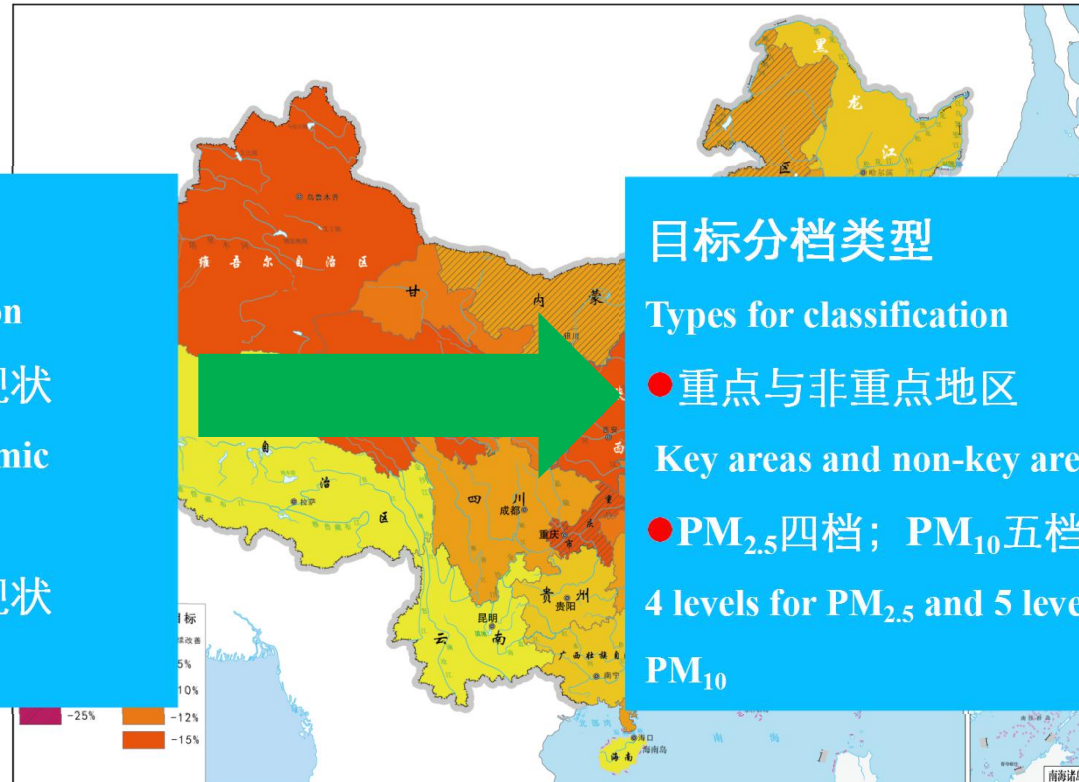

Types for classification

- 重点与非重点地区

Key areas and non-key areas

- PM_{2.5}四档; PM₁₀五档

4 levels for PM_{2.5} and 5 levels for PM₁₀

- 为了推动责任落实，需要建立有效的《行动计划》实施绩效评估指标与方法体系，以评估和帮助指导各地《行动计划》的实施。

Performance evaluation indicators and methodology system is required for the implementation of the Action Plan.

研究内容1) 《行动计划》绩效评估指标与方法体系研究

1) Task 1: Study on Performance Evaluation Indicators and Methodology System for the Action Plan

《行动计划》的预评估 Pre-evaluation

《行动计划》实施进展的追踪评估 Dynamic/Track evaluation/Post evaluation

强调绩效考核 Emphasis on performance evaluation

兼顾工作努力程度 Taking into account the work effort

空气质量改善绩效指标

大气综合整治工作指标
Air pollution control task indicator

➢ 主要评估指标 Primary evaluation indicators
➢ 全国范围 Nationwide

➢ 辅助评估指标 Auxiliary evaluation indicators
➢ 重点区域年度考核 For annual assessment of key areas

Air pollution control task indicators

Index	Content
Air pollution control task progress	Optimize industrial structure <ul style="list-style-type: none">• Reduce Excessive Production Capacity• Phase out outdated production capacity• Relocation of heavy pollution enterprise
	Optimize energy structure <ul style="list-style-type: none">• Total coal consumption control• Optimize coal consumption structure• Improve coal quality• Improve energy use efficiency
	Industry pollution control <ul style="list-style-type: none">• Phase out small coal boilers• Desulfurization, de-nitrogen and dust removal projects in key industries.• VOCs control• Oil and gas recovery
	Dust control <ul style="list-style-type: none">• Construction site• road• Storage
	Vehicle pollution control <ul style="list-style-type: none">• Phase out Yellow label• Improve oil quality• Strict vehicle standard
Heavy pollution warning	day early warning <ul style="list-style-type: none">• Timely warning information• In strict accordance with the warning level to activate contingency plans

- 整理工作任务，建立评分机制 Sort measures, and establish scoring mechanism
- 根据在空气质量改善效果中的重 要程度确定任务分值 Determine the score of the task based on the effect on improving air quality
- 可定量、可评估、可考核 Could be quantified, evaluated and assessed

研究内容1) 《行动计划》绩效评估指标与方法体系研究

1) Task 1: Study on Performance Evaluation Indicators and Methodology System for the Action Plan

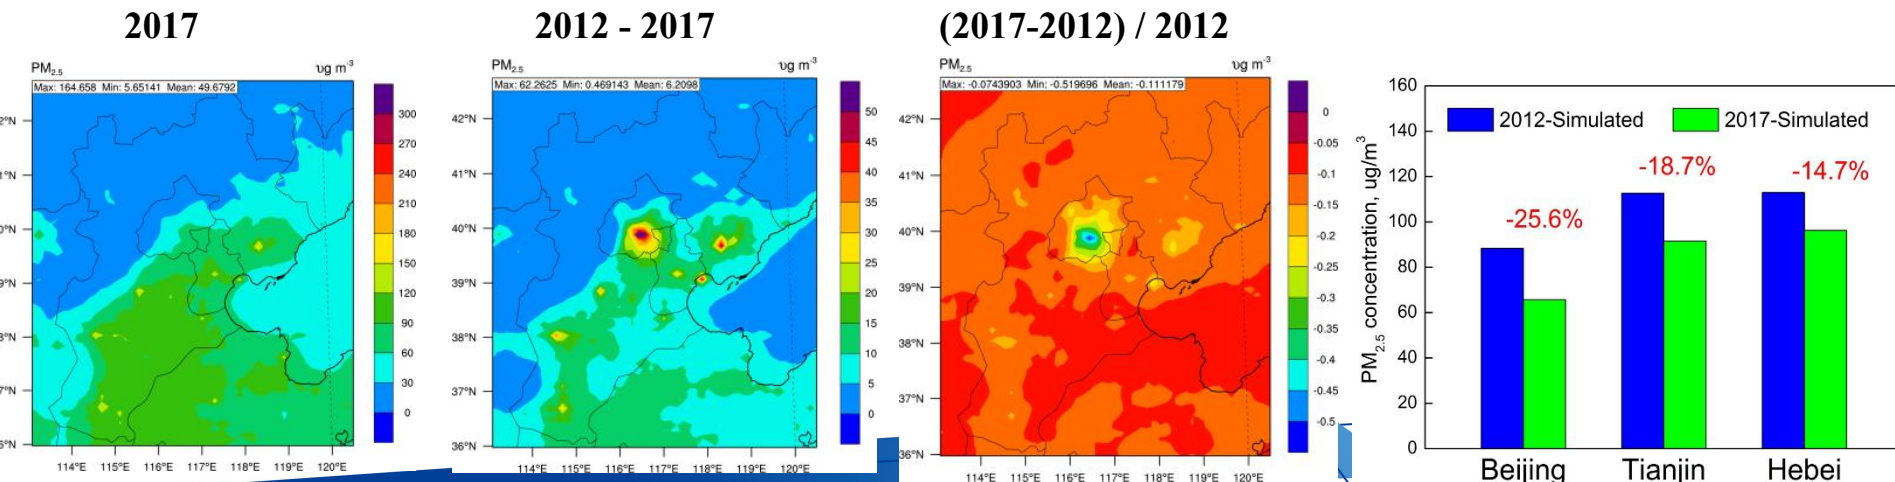

京津冀预评估案例分析 A pre-evaluation of 2013-2017 Action Plan for Jing-Jin-Ji

- 模拟结果显示，现有能定量减排的政策措施落实后，北京PM_{2.5}浓度降幅明显，但天津市和河北省仍存在达不到2017年浓度降低25%的风险。

Preliminary simulation results based on existing policies and measures which could be quantitatively analyzed show that the Beijing PM_{2.5} concentrations reduce significantly, but Tianjin and Hebei are at risk of failing to reach the target.

- 现在的资源、能力建设等基础尚不能支持政策措施全面落实到位，后续需进一步强化多源多污染物的协同控制力度。

The resources, capacity building and other infrastructure are not yet available to fully support the implementation of all measures, more stringent controls are necessary.

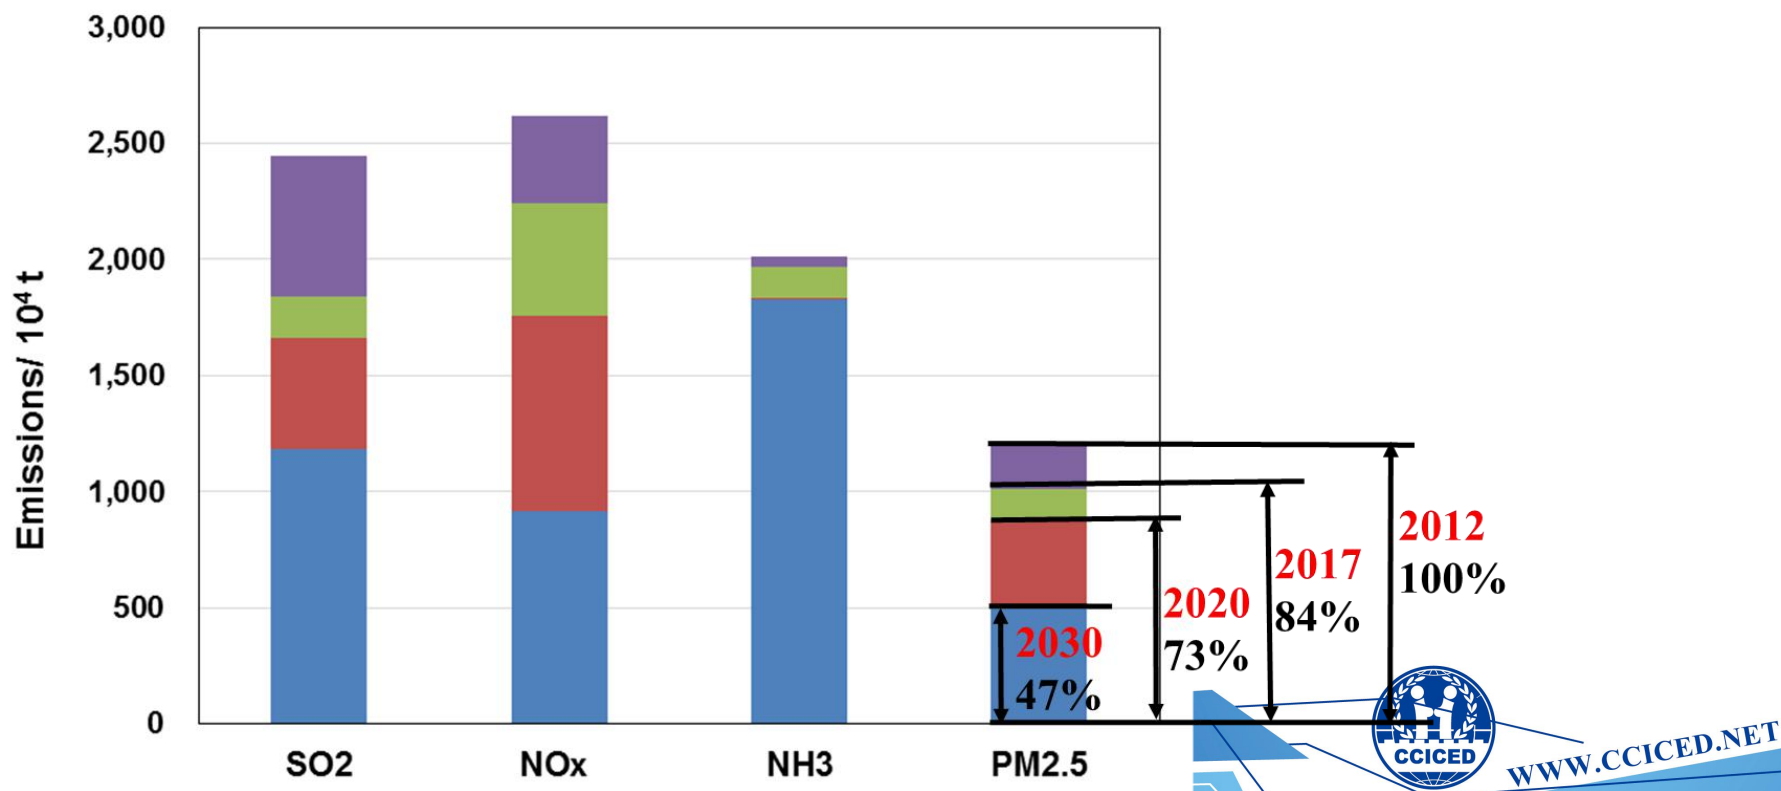

研究内容2) “十三五”与2030年大气污染防治目标与路线图

2) Task 2: Air Pollution Prevention and Control Roadmap for the 13th FYP and 2030 Long-term Plan

基于2030年空气质量达标的全国污染物排放量控制目标：以2012年为基准，2030年全国SO₂、NO_x、一次PM_{2.5}和VOCs排放量应分别削减52%、65%、57%和39%，NH₃排放量有所下降。

Emission reduction target in China: by 2030, the emissions of SO₂, NO_x, PM_{2.5} and VOCs in China should be reduced by 52%, 65%, 57%, and 39% compared with those of 2012. The emissions of NH₃ should decrease slightly.

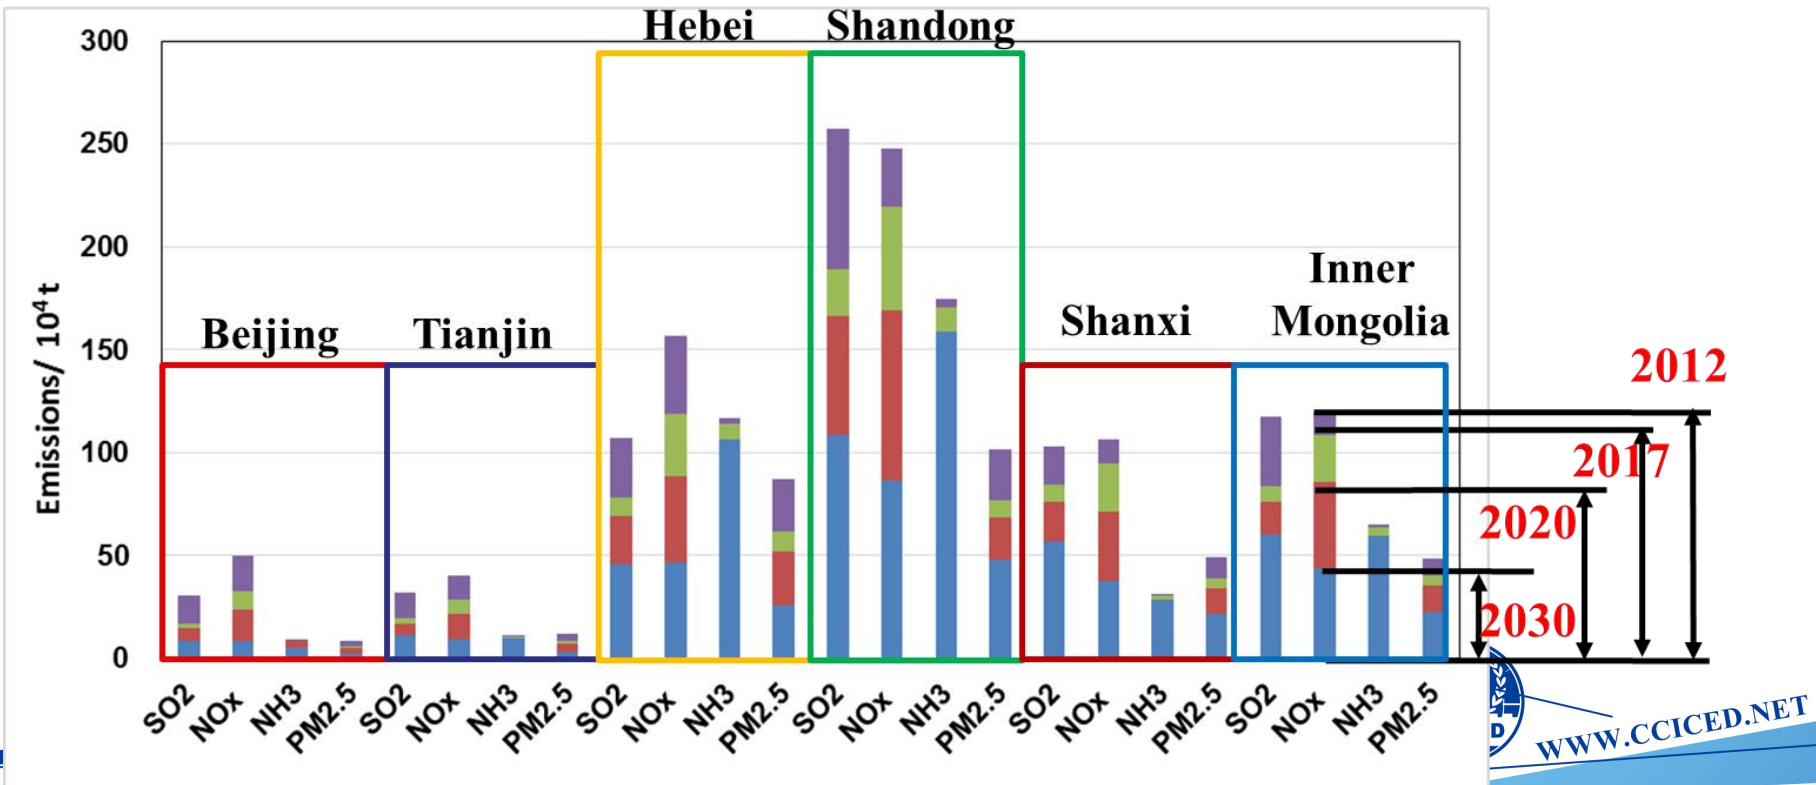

研究内容2) “十三五”与2030年大气污染防治目标与路线图

2) Task 2: Air Pollution Prevention and Control Roadmap for the 13th FYP and 2030 Long-term Plan

对于污染严重的重点区域，应采取更严格的控制力度：例如**京津冀地区**2030年SO₂、NO_x、PM_{2.5}、VOC和NH₃的排放量至少应分别削减59%、72%、70%、44%和21%，且周边山东等省需同步严格控制。

We should intensify emission control in heavily polluted areas. For example, SO₂, NO_x, PM_{2.5}, VOC and NH₃ emissions in the Beijing-Tianjin-Hebei Region in 2030 should be reduced by at least 59%, 72%, 70%, 44%, and 21% respectively.

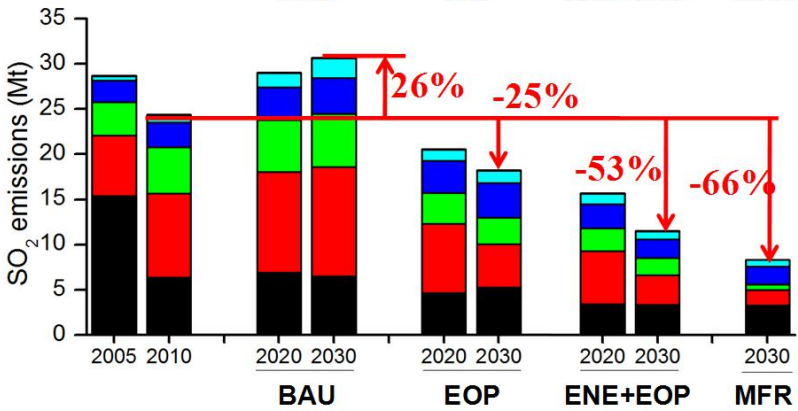

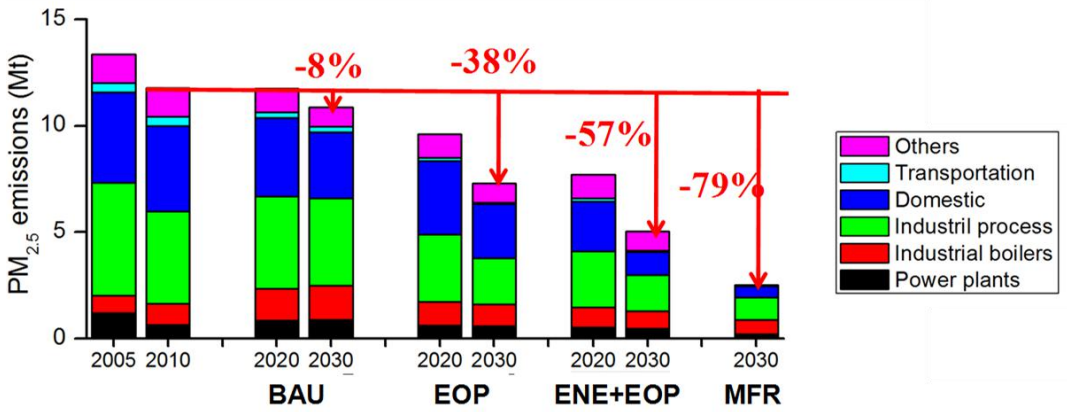

研究内容2) “十三五”与2030年大气污染防治目标与路线图

2) Task 2: Air Pollution Prevention and Control Roadmap for the 13th FYP and 2030 Long-term Plan

Emission Control Pathways

要实现2030年空气质量达标需采取非常严格的控制情景
Either ENE+EOP or MFR scenario need to be adopted to achieve the air quality target by 2030 in China.

- 1) Business as usual, 趋势照常情景 (BAU);
- 2) End-of-pipe control, 末端治理情景 (EOP)
- 3) Alternative energy policy + End of pipe control, 可持续能源+末端治理情景 (ENE+EOP)
- 4) Maximum Feasible Reduction, 最大减排潜力情景 (MFR)

研究内容2) “十三五”与2030年大气污染防治目标与路线图

2) Task 2: Air Pollution Prevention and Control Roadmap for the 13th FYP and 2030 Long-term Plan

- **煤炭清洁高效可持续利用 Clean, efficient and sustainable use of coal**
 - 煤炭优先用于电厂等大型燃烧设备，推进小型燃煤锅炉和炉灶的淘汰，推广集中供热
 - 着力提高煤炭利用效率：燃煤电厂的平均热效率由2010年的36%提高到2030年的42%；工业锅炉、炼铁高炉、水泥生产、炼焦炉和砖瓦窑单位产品的能耗从2010年到2030年分别降低24%、13%、16%、44%和27%
- **加速能源结构调整，提升清洁能源比例 Speed up the adjustment of energy structure; increase the use of clean energy**
 - 到2030年，全国煤炭占能源消费比例不超过50%
 - 2030年天然气、核能、可再生能源（不包括生物质）占比应达到25%
- **强化多源、多污染物的协同控制 Strengthen the coordinated control on multi-sources and multi-pollutants**

研究内容3) 区域大气污染防治协调机制国际经验

3) Task 3: International Experiences of Coordination Mechanism for Regional Air Pollution Prevention and Control

区域空气质量管理国际经验

Regional air quality management

Table C.13: 2011 country-to-country blame matrices for **PM_{2.5}**.

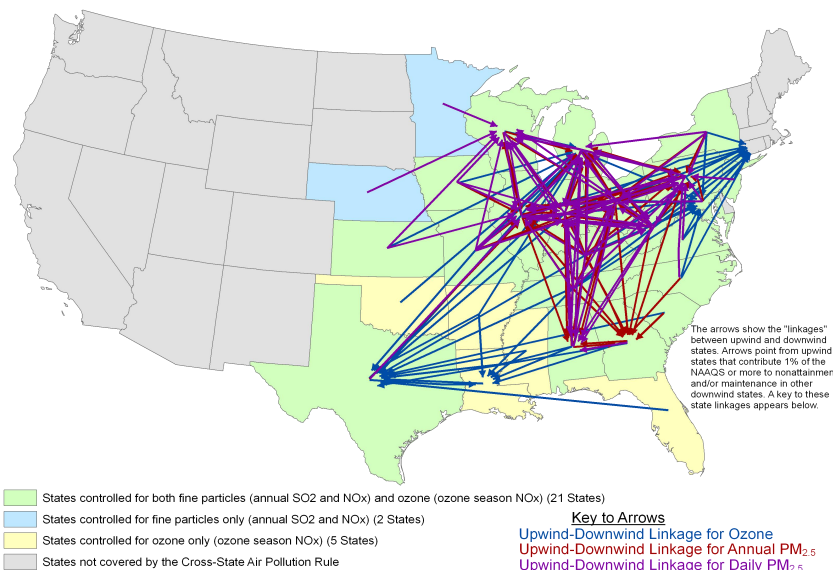

Units: ng/m³ per 15% emis. red. of PPM, SO₂, NO_x, NH₃ and VOC. **Emitters** →, **Receptors** ↓. (Based on ECMWF meteorology.)

欧洲**1979**年签署“长距离越境空气污染公约”，减排政策的制定建立在定量化跨界输送分析基础之上。

CLRTAP, emission reduction policy built on the basis of quantitative analysis of cross-border transport.

Source: USEPA

美国建立区域性的规划机构（**RPO**）协调区域大气污染防治 EPA and states and other stakeholders created regional planning organizations to foster regional coordination and cooperation.

Establish emission tracking systems

Improve regional modelling capabilities

Build capacity for air quality management

研究内容3) 区域大气污染防治协调机制国际经验

3) Task 3: International Experiences of Coordination Mechanism for Regional Air Pollution Prevention and Control

- 中国应实施强有力的区域协调计划，确保空气污染地区内所有相关方进行密切协调 China should adopt a strong regional program to assure close coordination by all parties whose emissions contribute to the air quality in a given air shed
 - Facilitate coordination and cooperation among provincial and municipal air and energy officials.
 - Build capacity through training, and sharing experiences and lessons.
 - Bring consistency to emission data, monitoring networks and methods, and modeling analysis.
 - Leverage resources.
- 为实现最佳的减排成本效益，欧美采用了多部门协同控制方法，中国也应该采用这种方法 Integrated multi-sectorial policy approaches have been used to cost-effectively reduce emissions in Europe and the US and should be used in China - SO₂, NO_x, PM and VOCs emissions should be reduced through: (i) energy efficiency improvements (decoupling between GDP and energy consumption), (ii) changes in fuel input, i.e., substitution of coal by cleaner fuels, and (iii) dedicated end-of-pipe emission control measures, with strict enforcement mechanisms.
 - *Stationary sources*: Minimum performance standards based on the best available emission control technologies which are not excessively costly, should be required for all new major sources and any major sources undergoing significant modification or relocation. In polluted areas, local authorities should be authorized to impose even stricter standards.

研究内容3) 区域大气污染防治协调机制国际经验

3) Task 3: International Experiences of Coordination Mechanism for Regional Air Pollution Prevention and Control

- *Mobile sources*: While local vehicle emission standards can accelerate early progress, motor vehicles especially commercial vehicles travel across political boundaries; therefore, national vehicle emission requirements should be sufficiently stringent to address the most serious air pollution problems.
- *Mobile sources*: Once fuel of sufficient quality is available, the most stringent feasible vehicle standards have been found to be very cost effective in Europe and the US and should be adopted in China. Economic incentives, such as emission-dependent vehicle taxes and motorway charging schemes, should be used to promote faster modernization of the vehicle fleet or retrofit with exhaust gas treatment systems, like diesel particulate filters.

➤ 中国应花大力气建立强有力的措施实施保障计划 China should focus on building a strong and effective compliance program

- The effectiveness of the policies and control measures adopted by China is ultimately dependent on a well-funded and staffed compliance program.

研究内容3) 区域大气污染防治协调机制国际经验

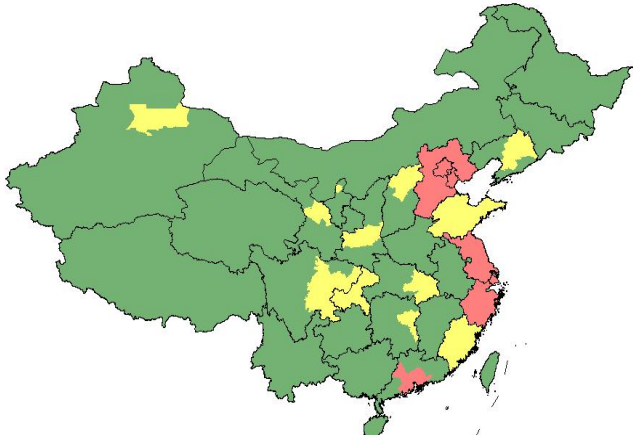

3) Task 3: International Experiences of Coordination Mechanism for Regional Air Pollution Prevention and Control

- 中国清洁空气计划的关键：制定能够充分保障公众健康的合理空气质量标准，建立能够准确评估措施实施的监测网络 Setting appropriate air quality standards that will adequately protect public health and implementing a monitoring network that accurately assesses compliance with those standards should be the backbone of China's Clean Air Program
 - Ambient air pollution data quality should be ensured through carefully designed and operated data quality assurance and quality control (QA/QC) procedures.
 - Ambient monitoring networks should be designed to enable the apportioning of the contributions from local sources, urban conurbations, and regional pollution sources.
- 中国的当务之急：制定污染控制有效性评估方案，量化空气质量改善进展 A process for measuring the effectiveness of control measures and determining progress in improving air quality should be a priority for China
 - The evaluation of annual air quality changes should be adjusted for inter-annual differences in meteorological and other conditions.
 - Measuring annual improvement in air quality is strongly linked with quality/accuracy of the monitored data, and the needed capacity for QA/QC procedures.
- 中国应强调大气污染物减排对改善气候变化的协同效益 China should highlight the climate change co-benefits of the air pollution control effort
 - China's air pollution control effort will reduce coal consumption, increase the use of renewable fuels, improve vehicle efficiency, etc.; each of these air pollution control steps will reduce CO₂ emissions as a co-benefit.
 - Extremely important to highlight the climate benefits of the clean air strategy and the win-win nature of the effort

新疆	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

传统分区未考虑污染传输规律，缺乏对污染特征的系统分析，因此不够全面。

- 1) Conventional air pollution control and management in China lacks consideration of air pollution transport and a systematic analysis of air pollution.
- 2) In the future, regions should be scientifically grouped based on quantitative research based on satellites, ambient monitors and air quality models to enhance air quality management.

研究内容4) 区域大气污染防治协调机制与政策研究

4) Task 4: Coordination Mechanism and Policy Study for Regional Air Pollution Prevention and Control

对全国、京津冀及周边地区、长三角区域大气污染防治协调机制进行了系统评估

Assess the coordination mechanism in national, and Jing-Jin-Ji/Yangtze River Delta regions.

The 2th coordinated meeting in JJJ and surrounding area

The 1st coordinated meeting in YRD region

研究内容4) 区域大气污染防治协调机制与政策研究

4) Task 4: Coordination Mechanism and Policy Study for Regional Air Pollution Prevention and Control

National Air Quality Forecasting and Warning System

现有区域协作偏重于重污染天气的预警与应急联动，而在规划、控制目标和要求、常态化监督管理和联合执法机制的统一建设方面相对缺乏，环境信息共享覆盖面和深度远不能满足区域大气污染防治的要求。

- 1) The regional coordination mechanism is limited, focused primarily on heavy pollution weather alerts and joint emergency responses.
- 2) The regions lack unified plans, objectives, control requirements, supervision and administration. As to environmental information sharing, significant progress is needed to meet the requirements for regional air pollution prevention and control.

主要研究结论 Major Research Conclusions (1)

一、全国大气污染形势严峻，亟需建立完善的控制绩效评估体系

A Thorough Appraisal System is Needed for Air Pollution Plans

1) 以细颗粒物 (PM2.5) 为主要特征污染物的区域性大气环境问题日益突出。

Regional atmospheric problems, including PM2.5, which is becoming increasingly prominent.

2) 在《大气污染防治行动计划》指导下，亟需建立完善的控制绩效评估体系来科学评估各项措施实施带来的环境、社会和经济效益。

It is imperative to also establish a thorough performance appraisal system for scientific evaluation of the environmental, social and economic benefits generated by the pollution prevention and control measures.

3) 实施“大气十条”后京津冀地区PM2.5浓度降幅显著，但天津市和河北省仍存在达不到2017年浓度降低25%的风险，后续需进一步强化多源多污染物的协同控制力度。

According to the pre-implementation analysis of the Beijing-Tianjin-Hebei Region action plan, PM2.5 concentrations are expected to drop significantly. However, Tianjin and Hebei may not reach the 25% PM2.5 concentration reduction target by the year 2017. Resources and capacity for comprehensive implementation of the policy measures must be enhanced.

主要研究结论 Major Research Conclusions (2)

二、未来中国实现空气质量达标的多污染物协同减排压力巨大

China Faces Great Challenges to Reduce Emissions and Meet the Air Quality Standard

1) 以实现2030年重点城市空气质量达标为目标的减排压力巨大：以2012年为基准，2030年全国SO₂、NO_x、PM_{2.5}和VOC排放量应分别至少削减52%、65%、57%和39%，NH₃排放量略有下降。对于污染严重的重点区域，还应采取更严格的控制力度。

Air quality in key cities should achieve the ambient air quality standard for PM_{2.5} by 2030. On the basis of 2012 emissions, SO₂, NO_x, PM_{2.5} and VOC emissions nationwide should be reduced by at least 52%, 65%, 57%, and 39%, respectively, by 2030, and NH₃ should decrease slightly. We should intensify emission control in heavily polluted areas.

2) 亟需开展多污染物、多污染源和多区域的协同控制，采用调整能源结构、提高能源效率、加强末端治理等全过程的控制措施。

China should carry out coordinated control efforts for multiple pollutants and emission sources in different regions, adopting control measures that can complement the process of adjusting the energy structure, improving energy efficiency and enhancing end-of-pipe pollution control, etc.

China's Air Pollution Problem Will Require Years to Solve!

主要研究结论 Major Research Conclusions (3)

三、国际经验可为我国区域大气污染防治协调机制提供重要的参考

International Experience is an Important Reference for Regional Air Pollution Control and Coordination

1) 欧洲和美国要求地方和州/国家有关当局在规定的框架内达到环境空气质量标准，并提供减少排放和降低污染的综合策略，同时建立综合和信息公开的空气质量监测网。

- Europe and the US demand that the relevant local and state/national authorities achieve air quality standards within specified time frames.
- The European Air Quality Plans and the American State Implementation Plans outline comprehensive strategies for emission reductions and air quality improvements.
- Comprehensive air quality monitoring networks are used to evaluate progress toward meeting ambient air quality standards, and ensure transparency of relevant environment monitoring information.

2) 为协调区域大气污染防治，欧洲和美国均建立了完善的区域空气质量管理机制。

Both Europe and the US have established integrated management mechanisms for regional air quality to coordinate regional air pollution prevention across states/nations (e.g., CLRTAP, RPO).

主要研究结论 Major Research Conclusions (4)

四、中国区域协调机制较为松散，统一的规划、目标和管理较缺乏

China Lacks Strong Regional Coordination Institutions and Unified Plans, Objectives and Management

1) 传统的大气污染控制管理分区对大气污染传输规律考虑不够，缺乏对大气污染特征的系统分析。

Conventional air pollution control and management lacks consideration of air pollution transport and a systematic analysis of air pollution.

2) 以主要污染物总量减排为主的考核方式导致地方政府在一定程度上忽视了辖区空气质量改善，区域和城市缺乏统一的空气质量目标。

Because the performance appraisal focuses on total emission control of SO₂ and NO_x, local governments have, to some extent, not focused on air quality improvements. A lack of unified air quality objectives and lack of coordination among cities and provinces have hindered regional air quality improvements.

3) 现有区域协调机制较为松散，区域协作多停留在重污染天气的预警与应急联动

- The regional coordination mechanism is limited, focused primarily on heavy pollution weather alerts and joint emergency responses.
- The regions lack unified plans, objectives, control requirements, supervision and administration, as well as environmental information sharing.

主要政策建议 Major Policy Recommendations (1)

一、建立基于质量改善的大气污染控制管理模式

Building an Air-Quality-Oriented Air Pollution Management System

1) **提高空气质量达标的法律地位**：应在《大气污染防治法》中明确规定实施以空气质量达标为核心的大气环境保护目标责任制和考核评价制度。

Improve the Legal Status of Standard Air Quality: The *Atmospheric Pollution Prevention Law* should explicitly state that provincial and local governments must implement and enforce atmospheric protection programs based on air quality objectives.

2) 在以质量改善为核心的环境管理模式下，大气环境管理应打破行政边界的限制，**进行科学大气环境管理分区**：将我国东部污染较重且传输活跃的省份统一纳入一个分区。

- The **atmospheric management regions** should not be based purely on political boundaries, but should be **based on scientific assessments** that consider spatial and temporal distribution of emissions, meteorology, terrain and pollution transport.
- The **eastern provinces with heavy air pollution should be grouped into one region.**

主要政策建议 Major Policy Recommendations (2)

二、深化区域大气污染联防联控机制

Deepen Joint Prevention and Control for Regional Air Pollution

1) 针对污染严重的大气环境管理分区，如我国从京津冀到长江中下游的东部区域，从国家层面以区域空气质量整体达标为目标，**制定东部区域空气质量达标规划，推进区域大气污染协同控制。**

Based on the target of regional air quality compliance in key regions, such as **eastern provinces**, the schedule for achieving air quality standards in different cities should be **considered at the national level**, aiming to improve air quality while providing a reasonable and feasible pathway.

Policies should promote **coordinated control of regional air pollution**, rigorously control the total emission amount and reduce pollution transport.

2) 建立明确、统一、完整的区域大气污染防治管理机制。

Establish a clear-cut, unified and integrated regional air pollution control and management mechanism.

3) 整合国家科技力量建立区域决策支持和规划机构。

Establish regional decision support and planning agency to provide national and local scientific and technological resources.

主要政策建议 Major Policy Recommendations (3)

三、在现有措施的基础上进一步强化大气污染治理

Enhance Air Pollution Control Based on the Existing Measures

1) **煤炭清洁高效可持续利用**：优先用于控制水平较好的电厂等大型燃烧设备。燃煤电厂的平均热效率由2010年的36%提高到2030年的42%，2030年工业锅炉、水泥生产和炼焦炉单位产品的能耗分别比2010年降低24%、16%和44%

Clean, efficient and sustainable use of coal: Preferable to use coal in large-scale facilities with high-efficiency control technologies. The average energy efficiency of coal power increased to 42% in 2030 and the energy intensity per unit of production of industrial boilers, cement production and coke ovens should be 24%, 16%, and 44% lower, from 2010 to 2030.

2) **加速能源结构调整，提升清洁能源比例**：实施煤炭总量控制，2030年煤炭占总能源消费不超过50%，清洁能源利用（天然气、核能、可再生能源等）占比应达到25%

Accelerate adjustment of the energy structure and increase clean energy: Coal share of total energy consumption should be less than 50% by 2030 and the use of natural gas, nuclear energy and renewable energy up to 25%.

3) **强化多源、多污染物的协同控制**：为实现分阶段的大气环境质量目标和主要大气污染物排放控制目标，需坚持“协同”、“综合”、“联动”的战略思路。

Enhance coordinated control over various sources of pollution and contaminants.

主要政策建议 Major Policy Recommendations (4)

四、建立科学的评估制度

Establish Scientific Appraisal System

1) 建立**预评估和年度评估制度**，结合评估调整措施，保障达到预期目标。

- **Pre-implementation and annual appraisal systems** should be established so that local governments can assess progress and adjust measures as necessary to meet the goals.
- The pre-implementation indicators include projected reductions of PM_{2.5} concentrations and frequency of heavy pollution days.
- The annual appraisal indicators should include the actual monitored PM_{2.5} concentration, emission reductions and progress on control measures such as improving energy efficiency and adjusting the energy structure.

2) 建立**终期评估制度**，为空气质量持续改善提供技术基础。

A final appraisal system should be established to provide a technological basis for the sustained improvement of air quality. The appraisal indicators should include PM_{2.5} concentrations (multi-year moving average); number of heavy pollution days; economic, industrial and energy structures; and benefits to human health attributable to improved air quality.
